

## 3rd Manufacturing Plant Under Construction, Coming Online in 2019

Eurofins Alphora is pleased to announce another expansion to its commercial services and manufacturing capacity with the construction of a third cGMP manufacturing plant.

This plant will include additional 500L, 200L, and 50L vessels, allowing Eurofins Alphora to provide scale-up and commercialization services for an active and growing pipeline of niche, small molecule products. This new plant is on schedule to be fully validated and operational by Q1 2019.

This investment will complement a wide and growing range of API technology development services for complex small molecule products, including refined intermediates and niche, highly potent API's. The range of services cover IND enabling development, phase II and phase III, and commercial manufacturing with supporting CMC and regulatory support.
